The Founder's Journey: From Global Banking to Tajikistan

Ground-Level Problem Solving Since 2020

Holding a Bachelor's in Informatics from International Black Sea University (2017–2020), Abduhalim Beknazarov began his career at Majorel Georgia (March 2020 – June 2021) supporting Booking.com in English & Turkish. During the pandemic lockdown, he resolved internal IT issues and transitioned teams into secure WFH operations.

In Istanbul, he joined the Islamic Development Bank (IsDB) in March 2022 as Technical Support & NOC, resolving network and infrastructure incidents, before advancing to IAM Analyst (July 2022 – June 2024). He administered SailPoint IdentityIQ, managing full user lifecycles, PAM governance, access reviews, and SSO with DUO MFA.

From June 2024, at WGUARD (Turkey), he directs Monofor IAM/PAM operations (Monosign, Monosync, Monopam), architects VMware ESXi domains from scratch, and executes Google Workspace to Microsoft 365 hybrid migrations. He built 'WGuard Hub' to eliminate spreadsheets, while concurrently serving Fairstone Bank of Canada (since Feb 2026) as Security Administrator managing SailPoint ISC and Delinea PAM alongside his role at WGUARD.

With this verified pedigree across global banking and cybersecurity, Abduhalim founded ABM-Tech to deliver tier-1 enterprise infrastructure, IAM compliance, and custom ERP software directly to businesses in Tajikistan.

2020 – 2021 · Majorel & Booking.com

B.S. in Informatics (Tbilisi). Customer operations & IT troubleshooting in EN/TR; coordinated secure pandemic WFH transition.

2022 – 2024 · Islamic Development Bank (IsDB)

Tech Support & NOC → IAM Analyst. Administered SailPoint IdentityIQ, identity lifecycle, PAM, DUO MFA, and M365.

2024 – Present · WGUARD & Fairstone Bank

IAM Lead at WGUARD (Monofor, ESXi, Entra ID) & Fairstone Bank of Canada (Feb 2026–Present, SailPoint ISC & Delinea PAM). Founded ABM-Tech.

International Engineering Standards for Local Business

✗ The Status Quo in Tajikistan

- **Overreliance on Fragile Spreadsheets**

Vital customer data, order queues, and inventory tracked manually in Excel files that get corrupted or leaked.

- **Vulnerable & Blind IT Setups**

Zero PAM session controls, shared passwords, no offsite backups, and servers running with zero proactive monitoring.

- **The 'One-Person IT' Trap**

A single in-house sysadmin cannot simultaneously master databases, enterprise IAM, firewalls, and custom code.

✓ The ABM-Tech Partnership

- **Bespoke In-House Software & ERP**

Transforming spreadsheets into custom web/mobile platforms that automate your business workflows from day one.

- **Banking-Grade Security & PAM**

Certified SailPoint, Delinea, and Monofor expertise: role-based access, credential vaulting, and session recording.

- **Full Engineering Department at Low Cost**

A complete team of DBA, System, Network, Security, and Software specialists for the cost of one local employee.

End-to-End Capabilities Across the Enterprise Stack

Databases & Infra

PostgreSQL, Oracle, Linux & Windows Server administration, automated 3-2-1 backups, VMware ESXi clustering, and query tuning.

SLA: 99.9% Uptime

Custom ERP & Software

Full-cycle custom web apps, customer portals, dental/medical ERPs, and automated billing workflows that digitize manual work.

SLA: 99.9% Uptime

IAM, PAM & Security

SailPoint ISC, Delinea PAM, Monofor (Monosign, Monosync, Monopam), DLP, Data Classification, 2FA, and network segmentation.

SLA: 99.9% Uptime

Cloud & Migrations

Google Workspace ⇄ Microsoft 365 migrations, Azure Entra ID hybrid domain joins, and 1C / banking REST API integrations.

SLA: 99.9% Uptime

Proven In Production: The Sigmadent ERP Platform

Sigmadent Dental Laboratory (sigmadental.pro)

The Challenge:

Sigmadent manages dozens of daily custom orders across dental clinics in Tajikistan. Technicians and clinic managers relied on paper ledgers, phone calls, and spreadsheets. Orders occasionally went missing and piecework payroll was difficult to audit.

What ABM-Tech Built:

Engineered a custom cloud-based ERP platform from the ground up: doctor order intake portals, technician workflow checkpoints, automated barcode tracking, piecework salary calculations, and financial billing.

Measurable Outcome:

0 lost orders, 100% transparent technician piecework accounting, real-time stage tracking, and immediate 24/7 accessibility on mobile and web.

"ABM-Tech engineered our Sigmadent dental lab management platform from the ground up. What used to take hours of manual paperwork and lost spreadsheets is now transparent, fast, and accessible 24/7 on web and mobile. Outstanding engineering team!"

— Management Team

Sigmadent Dental Laboratory, Dushanbe

Day-to-Day Support: Responsive, Human, and Accountable

1. Direct Engineer Access (No Ticket Black-Holes)

Your leadership and staff communicate directly with assigned senior engineers via dedicated private Telegram chat, phone, or email. Fast, practical answers without robotic hurdles.

2. 24/7 Proactive Monitoring & Prevention

We don't wait for your team to discover a crash. Telemetry watches your databases, disk space, memory leaks, and network loads around the clock, catching 95% of issues early.

3. Rapid On-Site & Remote Action

Need emergency network hardware replaced, servers audited, or office moves rewired? Based on Rudaki 101, our engineers are physically on-site in Dushanbe fast.

4. Transparent Monthly Executive Reviews

Plain-human monthly reports detailing system uptime, resolved requests, security patches, and cost-reduction recommendations for your technology budget.

Our Operating Principles: Substance Over Hype

01. Zero Vendor Lock-in

You own 100% of your source code, databases, licenses, and passwords. We engineer standardized architectures you can manage or migrate anytime.

02. First-Class Trilingual Fluency

Fluent technical support and documentation in Russian, Tajik, and English—meeting both local regulatory and international standards.

03. Physical Presence in Dushanbe

Real office on Rudaki 101; local leadership accountable in person. We pick up the phone and come directly to your office.

04. Engineering Substance

We don't sell bloated retainers or meaningless buzzwords. Every server configured and line of code written delivers measurable business reliability.

Ready to Secure and Scale Your Technology?

Get a Complimentary 360° IT & Security Assessment

Before signing any contract, our senior engineers will audit your current server stability, backup readiness, database response times, and network security perimeter—delivering a clear, unbiased report with immediate action points.
